Group project presentation

Why a group project

- An occasion to put into practice what you have learned during this week
- An occasion to improve your technical and soft-skills
- Additionally, a way to get an evaluation, if you need it (but the project is an integral part of the course, not merely intended as an evaluation process)

What is a group project

- You may adapt/extend one of the notebooks adopted during this week to the use on **a different dataset**
- To select the dataset, we will refer to application domains that you will specify using this form:
<https://forms.gle/wTzCS6finBBTBCrw7>
- We will group you according to the application domain you specify
- What we expect: considering the limited amount of time, you can consider the project as the development of a proof-of-concept

Application domains

- Robotics / autonomous systems
- Medical / biological applications
- Automotive/autonomous driving
- Weather / climate/environment
- Security/surveillance/industrial applications
- Human-centric applications including HMI and HRI

Pick your favourite one!

What to do now

- Make a choice on the application domain and wait to receive information about the groups
- Contact your group mates and start reasoning on the dataset
 - You can look for interesting datasets in public repositories as Kaggle, PapersWithCode, HuggingFace,...
- Work on the project on Thursday afternoon (from 4 pm) and Friday morning
- Present the work on Friday afternoon
 - Feel free to organise work and presentation according to your preferences/needs (a different role for each member, working all together...)
 - Those of you who need the evaluation for this course **must** attend the presentation
